Report for Integration of Lost and Found Webpage into College Official Website

Mohamed Irfan
RRN: 220071601141
B.Tech CSE, 3rd Year

The purpose of this project is to provide a streamlined platform for students and faculty to report and search for lost and found items within the college campus. This webpage, designed with a user-friendly interface, enables users to easily report lost items and search for found items through a simple form submission process. Users can input details such as the item name, description, contact information, and upload an image of the lost or found item.

The webpage uses Firebase for real-time database management and storage, ensuring that the data is efficiently stored and retrieved. The responsive design of the webpage ensures accessibility across various devices, including desktops, tablets, and mobile phones. This project aims to facilitate better communication and coordination within the college community regarding lost and found items.

To integrate this webpage into the college's official website, we request a dedicated link on the homepage. This link should redirect users to the lost and found webpage, allowing them to access and utilize the service seamlessly. Furthermore, for the proper administration of the webpage, we recommend appointing an admin to manage the site, ensuring that the reports are handled efficiently and any misuse is promptly addressed.

Additionally, we require the approval and signature of the Dean of Affairs to authorize this integration and ensure it aligns with the college's policies and standards. The successful implementation of this project will not only enhance the user experience but also promote a more organized and supportive campus environment.

Thank you for considering this proposal. I look forward to your positive response and support in integrating the lost and found webpage into the college's official website.
